

FULL STACK JAVA DEVELOPER

tsaikumar557@gmail.com

PROFESSIONAL SUMMARY:

Skilled IT Professional with 7+ years of experience in Design, Development and Maintenance of web-based applications using JAVA/J2EE technologies.

Expertise in **Agile Methodology** and all phases of Software Development Life Cycle (SDLC) including analysis, design, coding and testing, expertise in integration using J2EE architecture and **Test-Driven Development**(TDD).

Experienced in designing and developing multi-tier scalable applications using Java and JEE Design Patterns.

Expertise in using IDEs like Eclipse/My Eclipse /RAD, IntelliJ, Net Beans.

Experienced in Development and Deployment of 3-Tier and n-Tier Architectures.

Hands on experience in **React JS, Angular JS** and **JavaScript** Frameworks.

Extensive experience on Application Servers including **WebSphere 6.1** and Web servers like **Apache Tomcat** and **JBOSS** etc.

Expertise in developing RESTful API's using **Microservices** and **RESTful** Webservices.

Expertise in developing Internet/Intranet Applications with Web Services, WSDL, Java, JSP, Servlet, **JDBC**, Struts, **Hibernate**, **XML**, Log4j, HTML, and JavaScript.

Experience in developing the User Interface Screens for presentation using Java, JSP, HTML, Java Script and Ajax,

Experience in Struts MVC and Spring MVC frame works, **Spring Boot**, React and Angular 4/5/6/8.

Experience on Web Technologies in using web design tools like, **Bootstrap**, HTML, implemented presentation layer using CSS3, JavaScript.

Expertise in the design, deployment, and operation of highly available, scalable, and fault-tolerant systems using **Amazon Web Services**: EC2, VPC, CloudWatch, CloudFront, CloudFormation, IAM, S3, RDS, SNS, SQS, DynamoDB, Elastic Beanstalk, API Gateway, and Lambda.

Knowledge in creating ARM templates for **Azure** platforms and various Azure services like Compute (Web Roles, Worker Roles), Azure Websites, Caching, SQL Azure NoSQL, Storage, Network services, Azure Active Directory, API Management, Scheduling, Auto Scaling, and **PowerShell** Automation.

Implemented continuous integration and deployment using CI/CD and version control tools like **Jenkins**, **GIT** and containerization using **Docker**.

Strong scripting experience in writing build scripts using **Apache Ant** and **Maven**. Sound knowledge in Version control systems like CVS, Subversion, Clear Case.

Experience in **OKTA** for using authentication and authorization.

Used Ping Federate to configure web service.

Exposure to various databases such as **MongoDB**, **Cassandra**, **SQL Server**, **DynamoDB**. Experience in using Design Patterns like MVC, **Data Access Object (DAO)**, **Singleton**, Business Delegate, Service Locator and Session Facade. Expertise in working with various tools like Maven, Ant, **Junit** and **Log4j**.

Good experience in **PL/SQL**, writing Stored Procedures, Functions, Packages, Views and Triggers.

Experience in writing and executing unit test cases using **JUnit** Testing Framework, **Mockito** and automation framework by **Selenium**.

Have knowledge of developing System Design using UML methodology with Rational Rose. Preparation of class and sequence diagrams using Rational Rose.

Expertise with Functionality, Integration, Regression, Compatibility, **Black Box**, **White Box**, Performance, Usability, Back-End and User acceptance testing.

Experience maintaining/deploying applications over Windows and LINUX.

Excellent problem-solving skills with strong technical background and good interpersonal skills.

Quick learner and excellent team player, ability to meet deadlines and work under pressure.

Expertise in leading small teams and able to work independently as well as in a team to satisfy the needs of the clients and worked as an **Offshore – Onsite** Coordinator.

Experience in designing Use Cases, Class diagrams, Sequence and Collaboration diagrams for multi-tiered object-oriented system architectures utilizing Unified Modeling Tools (UML) such as Rational Rose, Rational Unified Process (RUP).

Operating	Windows XP/Vista/7/8, UNIX, Linux.
Programming	C, C++, Java, Objective C, JavaScript, Python
Scripting	JavaScript, jQuery, AJAX, JSD
Design Skills	UML, OOAD, J2EE Design Patterns, Singleton, Facade, DAO
Web	Struts, Spring, Servlets, XML, JDBC, Java Beans, HTML, CSS, Custom Tag Libraries
Cloud	AWS, A
Database/Query	Cockroach DB, Aurora DB, SQL server, My SQL, DB2, SQL Developer, OracleDB,
Web Services	SOAP, REST, JAX-WS, JAX-RS, JMS, JSP, JSTL, JSP, JSTL, JSP, JSTL
Application/	JBOSS, Apache Tomcat Web Server.
GUI Tools/IDE	Eclipse, IntelliJ, Net beans, RAD
Testing/	Testing – Junit, Mockito, Selenium, Logging – Log4j, Build Tool – Ant 1.7, Maven
Development	Agile methodology, Waterfall
Version Control	Rational clear case, SVN, CVS, Git, Bitbucket

EDUCATION:

Bachelor of Technology in Computer Science & Engineering, JNTU.
 Master of Science in Computer Science, Governors State University.

PROFESSIONAL EXPERIENCE:

Paychex Inc., Rochester
Sep 2022 - Present

TITLE: Sr. Java/UI Developer

Paychex, Inc. is a provider of integrated human capital management solutions for payroll, benefits, human resources, and insurance services.

Responsibilities

- Developed and maintained Java **Spring Boot** applications, handling multiple microservices.
- Managed multiple microservices which are primarily responsible for user subscriptions, permissions and privileges, ensuring seamless integration and functionality across the system.
- Created and enhanced new components and features, delivering user-centric interfaces based on stakeholder requirements using Grunt and **Angular JS**.
- Utilized **Oracle** Database and **TOAD** for efficient data storage and retrieval, optimizing database performance.
- Led the migration of applications from **WebLogic** to OpenShift and upgraded microservices from Java 8 to Java

Successfully upgraded Java microservices, moving from Spring Boot 2.7 to 3.x, JUnit 4 to JUnit 5 and Hibernate to Spring Data JPA, ensuring compatibility and performance improvements.

Resolved compatibility issues during the Java 17 upgrade, ensuring smooth integration with existing libraries and frameworks.

Addressed breaking changes in Spring Boot during the upgrade, refactoring code and adjusting configurations to maintain application stability.

Troubleshoot complex issues during the Hibernate upgrade, optimizing query performance and ensuring data integrity with the transition to JPA.

Worked on an epic to convert **SOAP** endpoints to **REST** endpoints, modernizing and streamlining API architecture.

Utilized **Swagger** to design, document, and test RESTful APIs, ensuring clear communication and seamless integration across development teams.

Containerized applications using **OpenShift**, enhancing scalability and deployment efficiency.

Employed Splunk for log monitoring and **AppDynamics** (AppD) for tracking application performance, identifying and resolving issues proactively.

Analyzed and resolved performance bottlenecks by examining **heap dumps**, identifying memory leaks, and optimizing resource utilization within microservices.

Implemented **RabbitMQ** for reliable message queuing, ensuring efficient communication and task distribution between microservices.

Utilized **Apache Kafka** for building and managing distributed streaming platforms, enabling real-time data processing and integration across microservices.

Utilized **Jenkins** for CI/CD processes and used **XL Deploy** and **XL Release** for successful application deployment across various environments.

Employed **Flyway** to execute database scripts, creating roles and defining permissions.

Utilized **SOAP UI** for testing SOAP-based web services, ensuring the integrity and performance of API integrations.

Designed and implemented **GraphQL queries and mutations** to improve data fetching efficiency and enable more flexible API interactions.

Used **Test Automation Framework**(TAF) to perform regression testing, sanity checks once the services deployed to respective environments.

Monitored team health and growth using Agility Health, evaluating and improving team performance.

Leveraged **Jira** for tracking project progress, Utilized **Confluence** for documentation and knowledge sharing, Utilized **Bitbucket** for version control and code collaboration.

Spearheaded a project that improved application functionality performance by 50%, leading to increased system efficiency and user satisfaction.

Led incident response efforts and provided ongoing production support, ensuring minimal downtime and swift issue resolution.

Collaborated with stakeholders to gather feature requests, designed user stories, and aligned development tasks with sprint goals.

Tech Stack :

Java, Spring Boot, Angular JS, Hibernate, Data JPA, Junit, REST, SOAP, Oracle Database, TOAD, OpenShift, AppD, RabbitMQ, Kafka, Docker, Jenkins, SOAP UI, TAF, GraphQL, Postman, Gradle, Confluence, Service Now, BitBucket.

JP Morgan Chase & Co, Chicago

April 2021 - June 2022

TITLE: Sr. Java/J2EE Developer

Chase Bank serves nearly half of U.S. households with a broad range of products. [Chase online](#) lets you manage your Chase accounts, view statements, monitor activity, pay bills or transfer funds securely from one central place.

Responsibilities

Extensive hands on experience in full project lifecycle working as senior developer in delivering high quality, mission critical products and processes using **Agile Scrum** Methodology.

Performed Proof of Concepts on **Flyway** and **Liquibase** for the integration into Consumer and Community Banking and Global Banking Platform.

Developed a customized maven plugin on top of **Liquibase** as a Schema Management tool and marketed it to various departments in JP Morgan and deployed it to internal JFrog artifactory, maven artifactory and Nexus repository.

Developed different applications which represents the mapping between multiple service domains and to visualize the across all the microservices.

Developed front end application with **React** and used state object **React class component** for general stateful management.

Developed the application with latest React features centralized with hooks.

Incorporated with **@Reach/Router** to handle routing.

Deployed both the backend and frontend services of schema visualization application and hosted on the cluster which directly takes the microservice data published from plugin using post end point url.

Developed microservice that communicates with the front end application with **Spring Boot** based services interacting through a combination of **REST** and **Apache Kafka** message brokers.

Created Kafka topics to store the messages and used Avro schema registry to encode those messages and visualized those the front end.

Developed and Implemented OAuth 2.0 with different Grant Types on **Ping Federate** acting as Authorization Server to support Web service based SSO.

Experience in configuring **PingOne** to enable **PingID**.

Worked with **Microservices** using **J2EE Web Services** based on Spring Boot and created dynamic documentation of **RESTful** end points using **Swagger API**.

Used **Cockroach DB** which is hosted on AWS to store the respective data of the microservice and migrated to AWS **Aurora DB** with Postgres engine.

Worked on **Postgresql** for the domain modeler application and integrated it with custom maven plugin to validate against the CCB core business data dictionary.

Integrated custom maven plugin to **CI/CD** Jenkins and deployed Spring Boot based microservices with **Docker**.

Developed CI/CD system with Jenkins on **Kubernetes** environment, utilized Kubernetes, Docker and Openshift for the runtime environment for the CI/CD system to build, Test and Deploy and worked on AWS **Elastic Kubernetes Service** clusters.

Effectively worked on basic services like **AWS EC2**, **AWS RD2** and AWS load balancers.
Used certificate files to authenticate to Cockroach DB and implemented Kerberos authentication for Postgresql.
Worked on **AWS S3 buckets** to publish and store the delta changes sql query files which are generated using custom maven plugin to be used by DBA for the operations on higher environments like PROD.
Good knowledge on managing and integrating code Quality tools like **SonarQube**, manage **sonar rules**, **Quality gates**.
Used **Log4j** back for writing the logs including errors, warnings, info.
Implemented all the components following test-driven development methodology using **JUnit**.
Used **Postman** to test the RESTful API's for HTTP requests and the JSON output.
Followed Agile principles and used Atlassian tools like **confluence** for documentation, **bitbucket** for code repository, **JIRA** to create epics, tasks and subtasks.

Tech Stack :

Java, Spring Boot, XML, Hibernate, Liquibase, RESTful Web services, jQuery, JSON, Apache Kafka, Junit, Postman, Log4j, Cockroach DB, Postgresql, Aurora DB, Docker, Kubernetes, AWS, Jenkins, Sonar, Git, Bitbucket, Maven, JFrog, JIRA.

NIPR, Kansas

March 2019 - March 2021

TITLE: Sr. Java/J2EE Developer

NIPR provides the insurance industry with a data warehouse of producer licensing information from all fifty states, the District of Columbia, and four U.S. territories.

Responsibilities

Involved in **Agile Scrum Methodology** and **Test-Driven Development (TDD)** for the software development process to produce high quality applications.

Used **Eclipse IDE** for quick and efficient application development.

Used **Angular 8**, **JavaScript**, **Bootstrap**, **HTML5**, **CSS3**, **AJAX**, **XLTS** to develop Single Page Application.

Built **AngularJS** modules, controllers, pop up modals, and file uploaders.

Used AngularJS for cross browser functionality and used **ng-app** , **ng-init** , **ng-model** for initialization of **AngularJS** application data.

Implemented **microservices** using **Spring Boot** and enabled discovery using **Netflix** eureka server.

Used **Spring Boot** for building application with **Spring initializers** and bootstrapping the build configuration and develop custom solutions that act upon **Jenkins** information in authentic time.

Created **RESTful web services** interface to Java-based runtime engine and accounts.

Involved in making **Hibernate** enhancements to existing applications and to perform **CRUD** operation like create, read, update, retrieve.

Used AJAX frameworks like **jQuery**, **JSON** to develop rich GUIs and involved in performance tuning the website.

Applied design patterns including **MVC Pattern**, **Facade Pattern**, **Abstract Factory Pattern**, **DAO Pattern** and **Singleton**.

Used **XML** for presentation layer attributes, developed high performance object/relational persistence and query service for entire application utilizing **Hibernate**.

Developed microservices with **Spring Eureka** to retrieve API routes for the entire cluster. Using this strategy each spring service in a cluster can be load balanced and exposed through one **Zuul API gateway**.

Spring Security is used along with **OAuth 2.0**, API Gateway to secure REST API endpoints and also for load balancing.

Developed and Implemented OAuth 2.0 with different Grant Types on **Ping Federate** acting as Authorization Server to support Web service based SSO.

Experience in configuring **PingOne** to enable **PingID**.

Configured **Apache Kafka** to read and write messages from external programs and used as a queuing system for communication between Microservices.

Used **JUnit framework** to perform Unit testing of the application.

Implemented unit test for testing Angular components with frameworks using **KARMA** and **JASMINE**.

Used REST Client and **POSTMAN** to test the rest-based services and test the middleware services.

Worked on **Log4j** for logging errors, messages and performance logs.

Experience in creating **Docker Files** for Java based applications.

Utilized JDBC to establish connections, execute SQL queries and manage transactions between Java applications and **Oracle** DB instances

Involved in the creation of database objects like Tables, Views, Stored Procs, Functions, Indexes using **Oracle** tools like **Toad**, PL/SQL Developer.

Experience in working in **Cloud Platform (AWS)**. Hands-on basic services like **EC2, S3, ELB, RDS, EKS, Route 53** etc.

Effectively worked with **Jenkins** Integration Server is used to perform **Continuous Integration** and **Continuous Development** and **Sonar** to manage code quality.

Created and configured the continuous delivery pipelines for deploying **Micro Services** and **Lambda functions** using **Jenkins CI** server.

Used **Git** version control system for check in and check out code and for branching, tagging and merging and pushed the code to **GitHub**.

Apache Maven is used as Build tool to automate the build process for the entire application, preparing war file and deploying in **JBoss**.

Used **JIRA** for bug tracking and pull requests, Confluence where collaborate and shares important info and management and **GIT-Bitbucket** control source control.

Worked on the most complex problems where analysis of situations or data requires evaluation of intangible variance factors.

Tech Stack :

Java, JavaScript, Angular, Spring Boot, AngularJS, HTML, CSS, XML, Hibernate, RESTful Web services, jQuery, JSON, OAuth, Kafka, Junit, Karma, Jasmine, Postman, Log4j, Docker, OracleDB, AWS, Jenkins, Sonar, Git, GitHub, Maven, JBoss, JIRA.

[Aprima Medical, Richardson, TX](#)
[Feb 2018 - Feb 2019](#)

TITLE: Sr. Java/J2EE Developer

Aprima Medical Software, Inc. provides innovative electronic health record, practice management and revenue cycle management solutions for medical practices.

Responsibilities

Part of a team of 12 members and involved in Scrum meetings and followed **Agile** Environment throughout the development process.

Used the latest **Java 1.8** version to reduce the amount of code and compilation time using **Lambda** Functions, Default and Static Methods in Interfaces.

Moved existing **Angular4** controllers to **Angular6** components for more responsive and less dependency.

Designed the front-end web pages using **HTML, JavaScript, Angular JS, Bootstrap, jQuery** and **AJAX**.
Used **CSS** for better appearance.

Developed client-side portals for sales reps and medical doctors using Angular.js MVC pattern.

Responsible for making AJAX Calls for the UI Interactions to the Controller Actions using **AngularJS**.

Spring Boot version 1.5.6 is being used in a **Micro Services** Environment to build layers of different modules.

Worked with npm commands and using package.json for managing dependencies and dev-dependencies of **NodeJS** applications.

Spring Data **JPA** is used as **ORM** tool is implemented as a Data Access Layer to retrieve data from the Database Layer.

Designed Resource URI's for developing **REST Web Services** and used **Swagger** as a tool for generating Request and Responses as well as consuming the Web Services.

Used **RESTful** services to Implement Web Services and Consumed and published **JSON** Web Services in the application, used **JSON** to parse the data from server side to satisfy the business requirement.

Utilized **Postman** for calling API's from Backend to make sure data passing appropriate for Front End.

To build communication between Offboard and Onboard layers we use **RabbitMQ** as messaging service.

Worked with **OAuth 2.0** to generate SSL Certificates to let the consumers easily navigate to third party sites.

Used **Mockito** tool for performing Unit Testing and achieved 95% accuracy by using **JACOBO** tool and utilized H2 database as a part of testing.

Performed **Maven** build script for building and deploying the application.

Effectively worked with **Jenkins** Integration Server is used to perform Continuous Integration and Continuous Development to keep up with the Kubernetes environment.

Worked on creating **Jenkins** pipeline to build CI job and to download the tar file into **JFROG** Artifactory.

Worked on Configuration of Internal load balancer, load balanced sets and **Azure** Traffic manager. Managed **Docker** orchestration using Docker Swarm and responsible for the containerization of applications using Docker.

Design, Implement and Build **Azure** Monitoring for cloud systems and Remote Systems at other sites using Azure Diagnostics, Azure Monitoring agent, SCOM and Splunk.

Integrated Admin applications authentication with **Okta**.

Used **YAML** language for Data sterilization.

Utilized **Kubernetes** and **Docker** for the runtime environment for the CI/CD system to build, Test and Deploy.

Cassandra Database is used as Application Data Storage (ADS) to store the demographic info of the consumers.

Postgre SQL Database is used as Operational Data Storage (ODS) and **Dynamo DB** to store the data for metrics and backend reports.

Responsible for developing data pipeline by implementing **Kafka** producers and consumers.

Used **GIT** as a version control tool and GIT Bash as command line for GIT.

Used **GitHub** repository to submit code changes that are in turn reviewed by the dev leads before they are merged to the branch before production.

Worked with a multitude of **Atlassian** tools like **RALLY**, for assigning and resolving the tickets.

Created **YML** documents that serves as a container to store the database info and to integrate with various programming languages and text editors used in the project.

Tech Stack :

Java1.8, AngularJs, Spring MVC, Spring Boot, Spring JPA, Restful, HTML, CSS, Bootstrap, jQuery, AJAX, OAuth 2.0, Mockito, RabbitMQ, Postman, Maven, Jenkins, JFROG, Docker, Azure, Okta, Cassandra, PostgreSQL, Kafka, GIT, GitHub, Atlassian, RALLY.

Blue Cross Blue Shield, Kansas City, MO

Nov 2016 - Jan 2018

TITLE: Mid-level Java Developer

Blue cross blue shield offer access to health care coverage for hospitalists. In this project, Provider system application is built exclusively to support end-to-end provider network operations.

Responsibilities

Involved in all the phases of SDLC including **Requirements Collection, Design & Analysis of the Customer Specifications, Development & Customization** of the Application.

Implemented the development using **Agile/Scrum** methodologies user story, phase-wise development, iterative development.

Actively contributing towards the development of Advanced Provider Screening (APS) software for the end user CMS (Centre for Medicare & Medicaid).

Implemented the application, refactoring the existing code.

Create RFP (Request for Proposal) microservice to provide RESTful API utilizing **Spring Boot** with Spring MVC.

Developing **Single Page Application (SPA)** using the latest technologies like **React, NodeJS, Bootstrap, JavaScript, AJAX, CSS3, HTML5**.

Developed the **JSP, Java Beans, and Servlets** following the **MVC architecture**.

Involved in using **React JS** components, Forms, Events, Keys, Router, Animations and Flux concepts and used React-router to route the pages on the client side.

Used **Babel** as a transpiler, **Webpack** as the module bundler in **React.js** and **Redux**.

Worked in React JS for creating interactive UI's using One-way data flow, Virtual DOM, JSX, React concepts.

Involved in creating and designing a database and connect the database with **Hibernate (ORM)**.

Involved in making **Spring** and **Hibernate** enhancements to existing applications.

Used **Spring** Framework as middle tier application framework, persistence strategy using spring support for Hibernate for integrating with database.

Worked with **NoSQL** database **MongoDB** and developed custom MongoDB applications specific to client needs and Developed **PL-SQL** store procedures to convert the data from **Oracle** to **MongoDB**.

Involved in designing and deploying a multitude application utilizing almost all the AWS stack (Including EC2, **Route53**, S3, RDS, **Dynamo DB**, SNS, SQS, IAM) focusing on high-availability, fault tolerance, and auto scaling in AWS Cloud formation.

Defined **AWS Security Groups** which acted as virtual firewalls that controlled the traffic allowed to reach one or more **AWS EC2 instances**.

AWS Lambda was utilized for serverless implementations, where the functions were triggered when the database tables were updated and **AWS Cloud Watch** was utilized for alarms.

Testing the Configuration and integration of various applications with **Okta**, on sandbox environment as per requirement.

Installed, Configured the **Enterprise applications** on browser and diagnosed the issues with Java applications running on **Tomcat server**. Worked on Linux environment to deploy the application on the host tomcat server.

Used **Apache Maven** as a build tool for building the restful web-service, worked with **Jenkins** in continuous Integration by using **GIT** tool and executed projects in **Apache Maven** and **Ant**.

Used **Selenium** Data Driven framework and integrating it with **TestNG** and **Jenkins**.

Developed test cases for **Unit Testing**, Integration Testing with **Junit and Mockito**.

Implemented **Log4j** and **l18n** technology using npm libraries for a broader perspective of the project.

Monitored the error logs using **FTP** and fixed the problems.

Participated in Task Estimation and code designing /development of software using **Agile** development practices.

Used **Log4j** to print logging, debugging and warning information.

Used **JIRA** to keep track of **bugs** to reduce **downtime, increase productivity**, and Communication.

Tech Stack :

Java, React, NodeJS, HTML, CSS, React.js, Redux, Bootstrap, JSON, Spring Boot, JavaScript, Spring MVC, Hibernate, MongoDB, Oracle, AWS Stack, Okta, Tomcat, Maven, Ant, Selenium, Junit, Mockito, Log4j, FTP, JIRA.
